

Aperture Science Test Subject Safety Guidelines

Introduction

Test subject safety is our top priority at Aperture Science. Following these guidelines ensures optimal testing conditions and subject well-being.

Required Equipment

1. Aperture Science Long-Fall Boots (Prevents fall damage)
2. Advanced Knee Replacement Kit (For high-impact landings)
3. Portal Device (Issued during tests)
4. Testing Companion Cube (For emotional support)

Pre-Test Procedures

Step 1: Suit Up

- Wear approved testing jumpsuit
- Secure Long-Fall Boots (Velcro straps must be tight)
- Attach knee reinforcement pads
- Complete consciousness preservation waiver

Step 2: Physical Examination

- Baseline vitals recorded
- Reflex response tested
- Jump height measured
- Portal gun grip strength evaluated

Step 3: Briefing

- Receive test chamber objectives
- Review emergency protocols
- Sign mortality acknowledgment form

In-Test Safety Rules

DO

- Follow AI instructions immediately
- Use portals strategically
- Save weighted cubes for later chambers
- Press buttons marked with blue/orange indicators

DO NOT

- Attempt to leave testing area
- Disassemble portal device
- Mock GLaDOS (She remembers everything)

Trust promises about cake until testing is complete

Emergency Procedures

Portal Malfunction

Report to GLaDOS immediately
Avoid stepping through unstable portals
Use emergency teleportation device (located in vestibule)

Test Chamber Flood

Climb to highest available surface
Wait for emergency platform to rise
Do not attempt to swim in neurotoxin

High-Energy Pellet Malfunction

Seek cover behind weighted cubes
Alert facilities team
Do not attempt to catch the pellet

Post-Test Procedures

Return portal device at exit
Debriefing with AI system
Receive participation certificate
Wait for the cake (Processing time may vary)
