

Aperture Science Weighted Storage Cube: Handling and Usage Guide

Product Overview

The Weighted Storage Cube is a fundamental testing element in Aperture Science Enrichment Center activities. Its mass distribution properties make it invaluable for puzzle-solving and obstruction management.

Technical Specifications

- Weight: Approximately 22 kg
- Dimensions: 1m x 1m x 1m (standard cube)
- Material: Carbon-fiber composite with weight-distribution core
- Color: Standard white (with blue Aperture Science logo)
- Durability: Withstands 5000+ portal uses

Usage Instructions

Basic Operation

- Lifting: Use both hands on designated grip points
- Carrying: Keep cube level and close to body
- Placing: Gently set down on pressure plates
- Throwing: Only when necessary for gap crossing

Portal Interactions

- Can be carried through portals
- Maintains momentum when dropped through portals
- Creates sound-based pressure plate activation
- Useful for blocking energy pellets

Advanced Applications

Turret Deflection

- Position cube between self and turrets
- Cube absorbs bullets for approximately 4 seconds
- Use distraction window to activate turret disable switch

High-Energy Pellet Redirection

- Reflect pellets at precise angles
- Unlock secret testing chambers
- WARNING: Do not attempt without proper training

Companion Cube Alternative

- When companion cube unavailable
- Provides minimal emotional support
- Does not include heart-shaped decal

Safety Precautions

DO NOT drop on feet (Risk of severe injury)

Use caution near ledge edges

Report cracked or damaged cubes immediately

Do not attempt to paint cubes (This invalidates portal adhesion)

Maintenance

Weekly: Weight calibration check

Monthly: Surface integrity inspection

Annual: Full core replacement (if needed)
